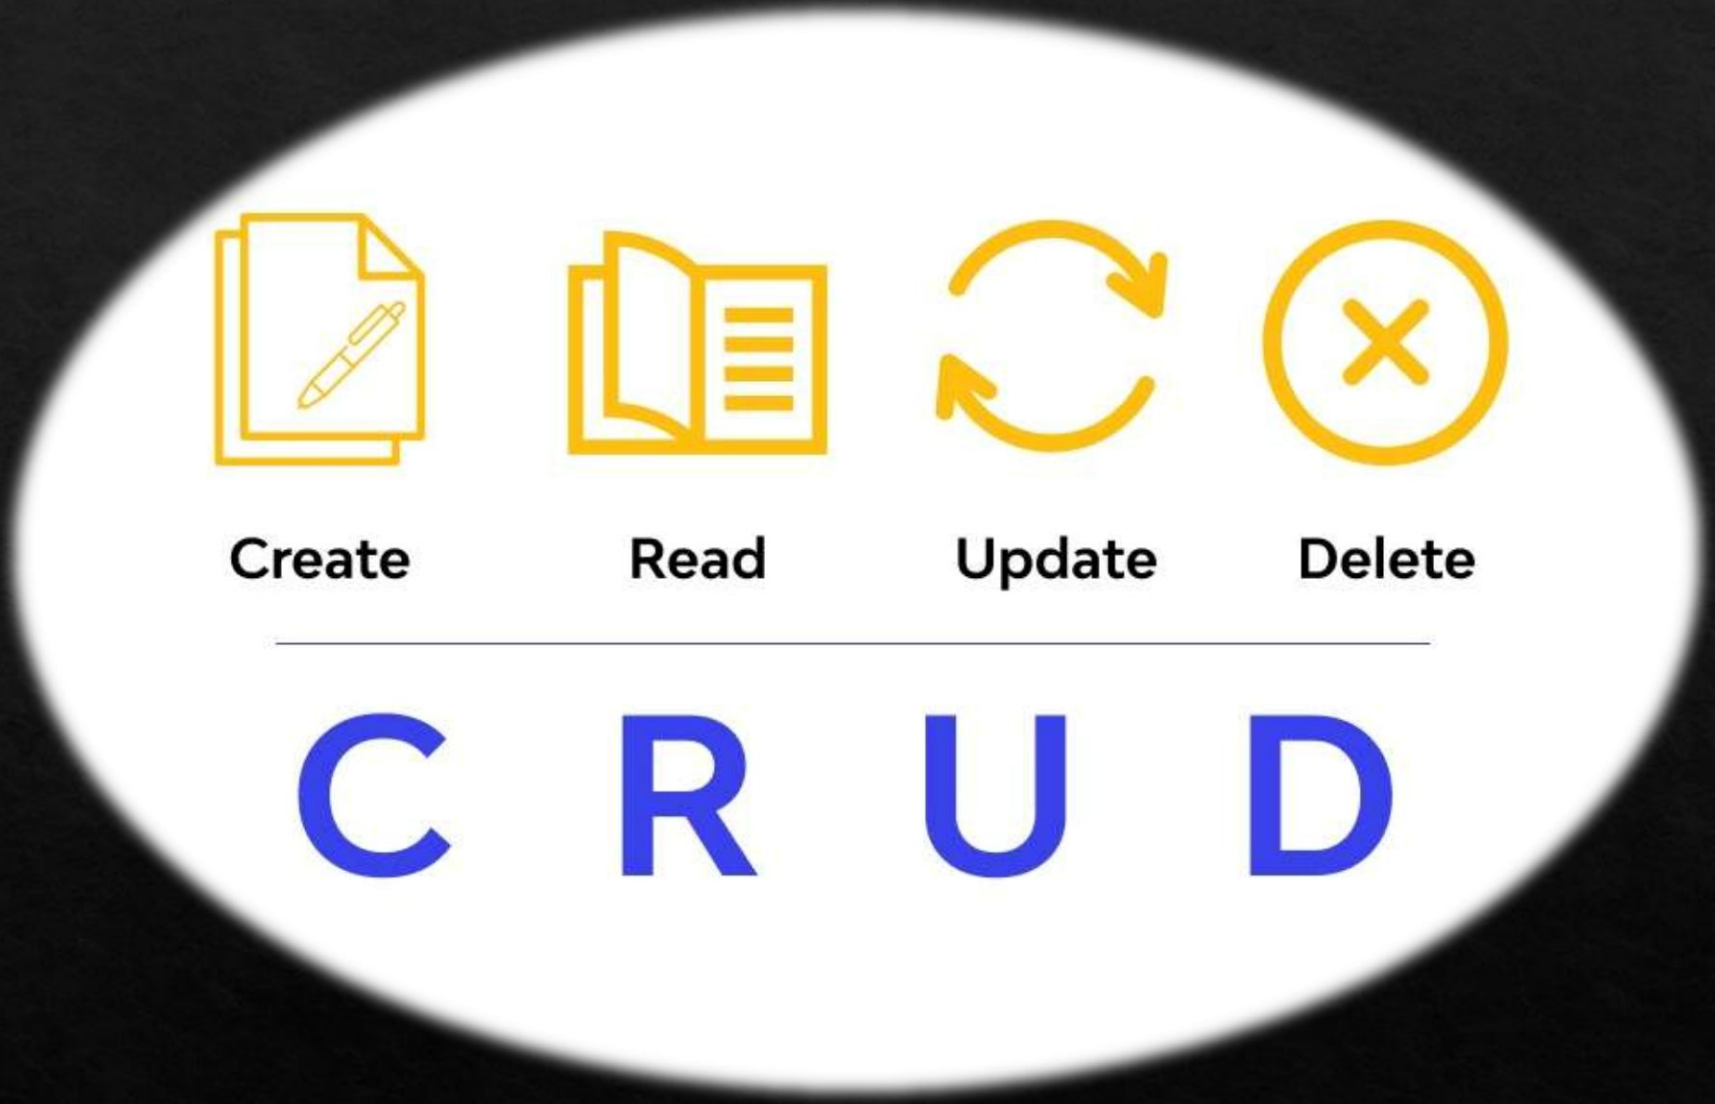
# Basic Mongo Shell Commands



Create
Read
Update
Delete
C R U D

# Commands For Database

show dbs **or** show databases → List all databases

use <db_name> → Create or switch to a database

db → show current database

db.dropDatabase() → delete current database

# Commands For Collection

show collections → List all collections in the current DB

db.createCollection('<collection_name>') → create a collection

db.<old_collection_name>.renameCollection("<new_collection_name>") → rename collection

db.<collection_name>.drop() → delete given collection

# Create

```
db.users.insertOne({ name: "Manas", age: 21 })

db.users.insertMany([
  { name: "Rahul", age: 22 },
  { name: "Aman", age: 20 }
])
```

# Read

```
db.users.find()
db.users.find().pretty()
db.users.findOne({ name: "Manas" })
```

# Update

```mongo
db.users.updateOne(
  { name: "Manas" },
  { $set: { age: 22 } }
)

db.users.updateMany(
  { city: "Bhagalpur" },
  { $set: { city: "Patna" } }
)
```

# Delete

```
db.users.deleteOne({ name: "Rahul" })

db.users.deleteMany({ city: "Bhagalpur" })
```

# Thank You
