

MongoDB Setup

Mongod

Engine of MongoDB. (MongoDB server that actually stores and manages the data)

It is the program that:

- ❑ Stores your data
- ❑ Handles queries
- ❑ Manages databases
- ❑ Runs on a machine/server

MongoDB
Shell
(CLI Tool)

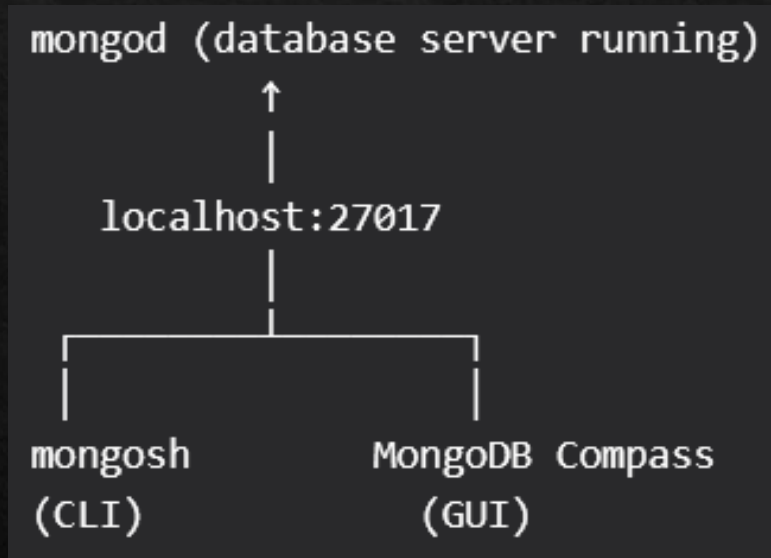

MongoDB Shell is how developers communicate with the MongoDB server using commands.

MongoDB
Compass
(GUI Tool)

MongoDB Compass is a Graphical User Interface (GUI) tool.

Default MongoDB address is:

`mongodb://localhost:27017` or `mongodb://127.0.0.1:27017`

Note:

localhost & 127.0.0.1 both means “Your own computer”

`mongod` runs the database on `localhost:27017`, and both `mongosh` and `Compass` connect to it using a connection string.

**Thank
You**
